TODD'S FARM

SUCHES, GEORGIA

1962 PRICE LIST

The dahlias listed in this little folder are grown in the Blue Ridge mountain section of North Georgia, where the high altitude with the cool, moist summers causes our dahlias to grow so they give satisfactory results when planted anywhere dahlias can be successfully grown.

Our customers tell us that our dahlias grow and bloom well from Key West, Florida, to St. Georges, Newfoundland.

If you do not know when corn planting time comes in your locality, try to find out so you can plant your dahlias then if you want early flowers. For late blooms, plant the dahlia bulbs six or eight weeks before cool weather begins in the fall.

Hot, dry weather may cause the stalks to harden which makes the dahlias stop blooming. A covering of trash (leaves, straw, etc.) placed around the plants will help to keep the ground cool and moist.
